- Adjusting stops and targets to reflect a stock's price range can also be an effective strategy. Consider using the Average True Range (ATR) to monitor a stock's average price over time when adjusting your stops and targets. ATR tries to show the commitment of traders. Large or increasing ranges can indicate that traders may continue to bid up or sell down a stock. A decreasing range can suggest waning interest.
- Portfolio rebalancing is the strategy of buying and selling bits of a portfolio to return each asset class to its original proportion. This method also works if the investor's risk tolerance level has changed and the portfolio needs to adjust similarly.
